

“Great product for pre cloud migration discovery!”

Faddom is a fantastic tool for cloud pre-migration discovery and assessment. Being cloud-independent means there's no bias in the decision-making process. The automated application discovery and dependency mapping feature is outstanding, and I highly recommend it. Fabulous customer support too.

MAPPING THE LEADING IT PLATFORMS

Map All Your Infrastructure to Gain Full Visibility

DOCUMENTATION

IT documentation and Asset Management

Everything starts with asset discovery. You always need to validate those assets that you don't believe to exist. If you don't have accurate documentation, nothing else matters.

MIGRATION

Data Center Console Cloud Migration

Transformations are messy and complicated. Get a complete assessment of you application and server architecture at the start to not leave anything critical behind.

MAPPING

NetSecOps and Microsegmentation

You can't protect what you don't know about. Knowing your environment inside out is the first step in planning micro segmentation and how your going to protect IT assets.

SEGMENTATION

Disaster Recovery and Business Continuity

Uptime is critical. Know where all you traffic is flowing across servers and applications to build complete backups based on dynamic information.

Plan infrastructure changes without gambling
