

Streamlined IT operations at Redpath Mining with Faddom.

Redpath Mining needed a reliable way to understand server connections and resolve infrastructure issues. Their Network Administrator, Kush, was looking to gain the visibility needed to troubleshoot problems, support server migrations, and simplify ongoing maintenance.

Organization details

- Industry: Manufacturing
- Employee size: 5,001-10,000
- Location: Ontario, Canada

With Faddom, Redpath Mining improved productivity and created a more stable, maintainable server environment.

Faster Troubleshooting

Complex server connection issues were identified and resolved more efficiently with clear dependency data.

Streamlined Server Migrations

Infrastructure visibility helped the team understand dependencies during server migration and maintenance activities.

Improved Server Stability

Proactive dependency mapping supported a more stable and maintainable environment for critical business processes.

Fast

Fully deployed within 60 minutes

Simple

Intuitive setup with little to no learning curve

Secure

No agents or credentials needed

Non-intrusive application dependency mapping.

Faddom is an agentless platform that helps organizations across different industries and regions visualize their entire on-premise and cloud infrastructure as business application maps in as little as 60 minutes.

Be proactive and plan ahead by always having dynamic, accurate IT documentation that updates continuously and automatically 24/7.

Kush Naik
Network Administrator
at Redpath Mining

“

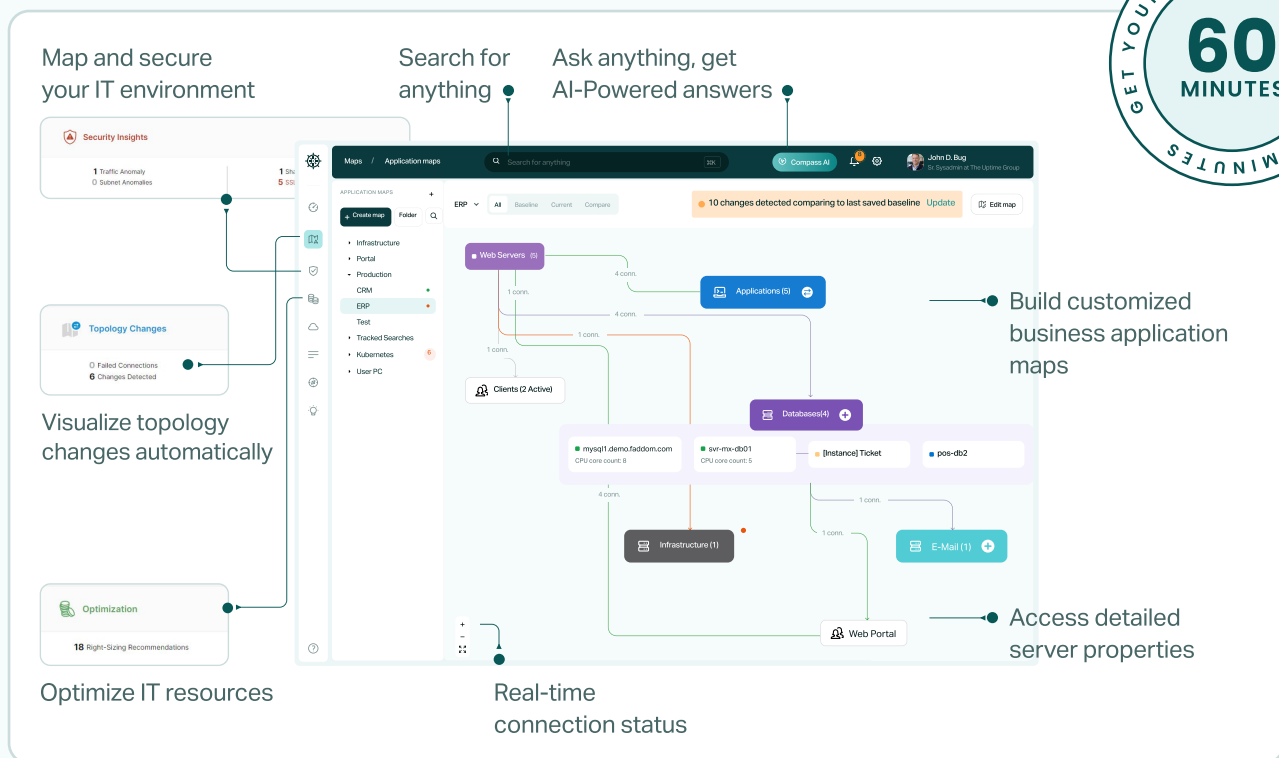

Faddom has been invaluable for troubleshooting server connection issues, supporting server migrations, and simplifying ongoing maintenance. Its insight into application dependencies has streamlined our technical operations, increased productivity, and helped us maintain a more stable server environment.

Key takeaway

Redpath Mining's experience with Faddom demonstrates how agentless dependency mapping can simplify complex IT operations. With greater visibility into server connections and dependencies, the team can resolve issues faster, support migrations, and maintain a more reliable environment for critical business processes.
