

Clearing the Fog for Migration at SIBS Romania with Faddom

As SIBS Romania prepared for a DR/BC project, static spreadsheets and diagrams couldn't provide a complete view of its infrastructure. Their Enterprise Architect, Paulo, was looking for an automated dependency-mapping process to provide the visibility needed to plan a migration.

Organization details

- Industry: Financial Services
- Employee size: 201-500
- Location: Bucharest, Romania

With Faddom, SIBS Romania gained a clear view of its infrastructure to support migration planning and reduce the risk of disruption.

Complete Dependency Mapping

Infrastructure and application dependencies were mapped in under an hour, replacing static spreadsheets and diagrams.

Hidden Infrastructure Discovery

Previously unknown assets and connections were uncovered, revealing blind spots across the environment.

Lower Migration Risk

Accurate dependency data helped the team reduce the risk of migration errors, downtime, and service disruption.

Fast

Fully deployed within 60 minutes

Simple

Intuitive setup with little to no learning curve

Secure

No agents or credentials needed

Non-intrusive application dependency mapping.

Faddom is an agentless platform that helps organizations across different industries and regions visualize their entire on-premise and cloud infrastructure as business application maps in as little as 60 minutes.

Be proactive and plan ahead by always having dynamic, accurate IT documentation that updates continuously and automatically 24/7.

Paulo Falcao
Enterprise Architect
at SIBS Romania

“

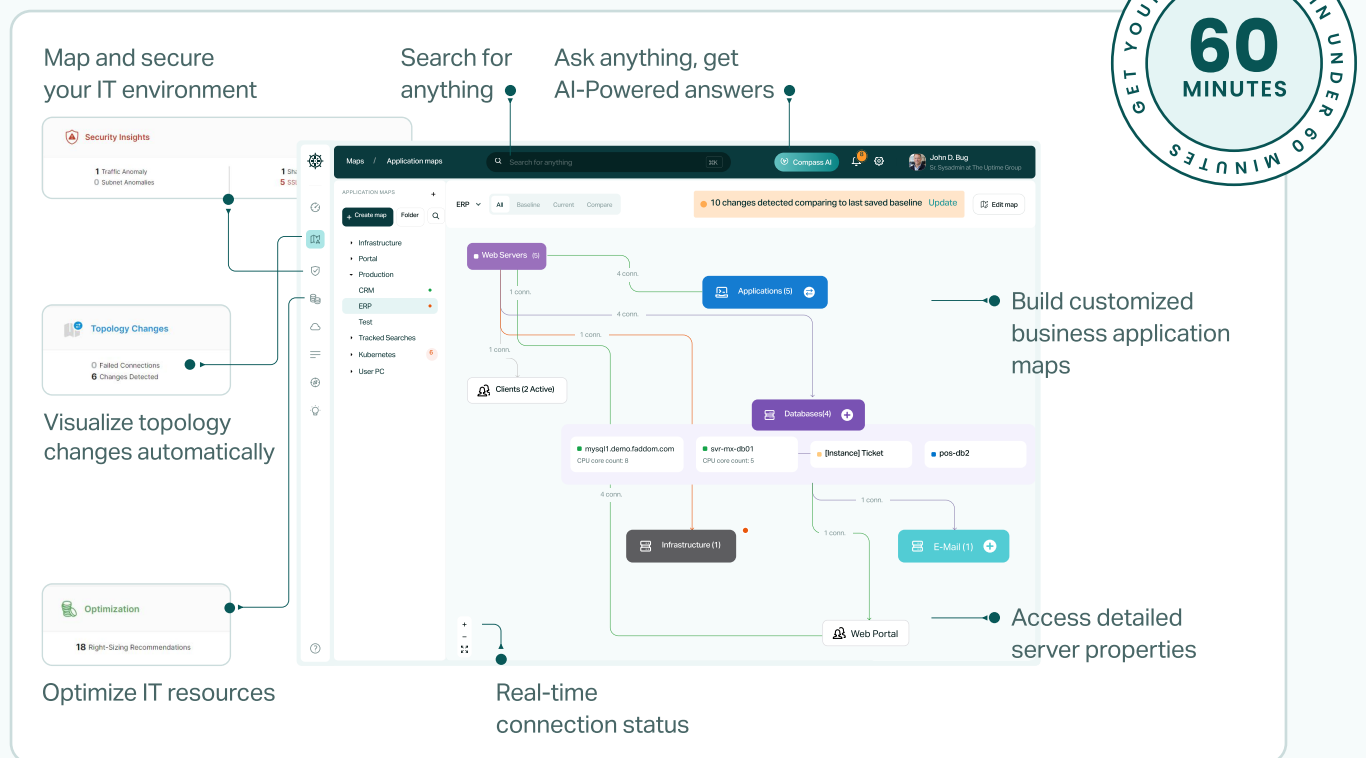

“Faddom cleared the fog around our infrastructure. It allowed us to discover things we weren't aware of and provided the visibility needed to better understand our systems. For teams planning a migration without a crystal-clear view of their infrastructure, Faddom can help uncover the blind spots left behind by existing documentation.”

Key takeaway

SIBS Romania's experience demonstrates how automated dependency mapping can support safer migration and DR/BC planning. By replacing static documentation with accurate infrastructure visibility, the team uncovered unknown connections and reduced the risk of errors, downtime, and service disruption.
